Remote Control Flying Ball

I want to fly faster, more stable, more high!

- Built-in gyroscope, automatic stabilizers flight
- Packed bumper cover, not to hurt the hand is not easy to bad
- Support Android and iOS phones manipulation

Flying more stable

Traditional toy helicopter to fly up like a headless flies?

Flying ball built-in gyroscope, supports automatic stabilizers flight.

You only need to select the option in the phone gyroscope control interface, the flight of the ball will automatically firmly hover in midair.

Flying more safer

By rotating propellers hit the finger?

Fell to the ground after the break? Fear of injury to children?

There is a flying ball external sleeve material ABS bull ring,
blocking the propeller can enhance the anti-collision capability.

Flying more higher

Lightweight materials bring 5.5 grams net weight, and increase the lift of the wings coaxial design, giving you maximum 8 meters (nearly three storey) effective altitude.

Flying more simple

Support Android and ios phones manipulation,
perfect adaptation ipad, iphone,mi phone etc.

More original "Move Motion" mode, you can tilt,
shake the phone to control the movement direction of flight of the ball.
